

FV/IH PR - Flush Valve Indicator Head, 25 psi Pressure Regulated Spray Body

Applications:

The FV/IH PR combines the function of a drip flush valve with a colored nozzle (orange or purple) assembled on a spray body, to give maintenance persons a visual indication of the drip system coverage areas. The flush nozzle popping up will also allow for the maintenance persons to quickly locate the flush valves instead of searching in dense ground covers for boxes below grade. Simply push down the top button to manually flush while the system is running.

Also, given the simplicity of the installation and cost of the components, this will be a much less expensive flush valve than currently used on most commercial projects. The nozzle is pre-assembled on the sprinkler head body as one assembly and for easy installation while having the 25 pressure regulator built in.

Features:

- Multi Purpose** - cleans, regulates and indicates system functioning.
- Variety** - offered in 4", 6" or 12" pop assemblies.
- Manual Flush** - simple press of the button and the system is flush activated.
- Ease of Installation** - Install as you would a sprinkler body spray at the end of the drip line lateral or zone.

Operating Pressure:

Flow Range: 5 - 60 psi

Manual Flush Pattern:

1 to 3 ft flush stream of water.

Models:

Part #	Description
FV/IH PR - 4	Orange Flush Indicator, on 4" Pop Up
FV/IH PR - 6	Orange Flush Indicator, on 6" Pop Up
FV/IH PR - 12	Orange Flush Indicator, on 12" Pop Up
