

GDFN - Combination; Drip Flush Valve / Indicator Nozzle

Applications:

The GDFN combines the function of a drip flush valve with a colored nozzle (orange or purple) to give maintenance persons a visual indication of the drip system coverage areas. The flush nozzle popping up will also allow for the maintenance persons to quickly locate the flush valves instead of searching in dense ground covers for boxes below grade. Simply push down the top button to manually flush while the system is running.

Also, given the simplicity of the installation and cost of the components, this will be a much less expensive flush valve then currently used on most commercial projects. The nozzle is available in standard orange and purple for reclaimed water applications.

Features:

- ☐ **Multi Purpose** - cleans, regulates and indicates system functioning.
- ☐ **Compatibility** - 2 versions, compatible with Rainbird or Toro pop ups.
- ☐ **Manual Flush** - simple press of the button and the system is flush activated. Release button to stop flush.
- ☐ **Ease of Installation** - Install on a sprinkler body spray at the end of the drip line lateral or zone.

Operating Pressure:

Flow Range: 5 - 60 psi

Manual Flush Pattern:

1 to 3 ft flush stream of water.

Models:

Part #	Description
